

# Asset tracking: more than GPS location

Features

## Future-proof GPS Asset tracking

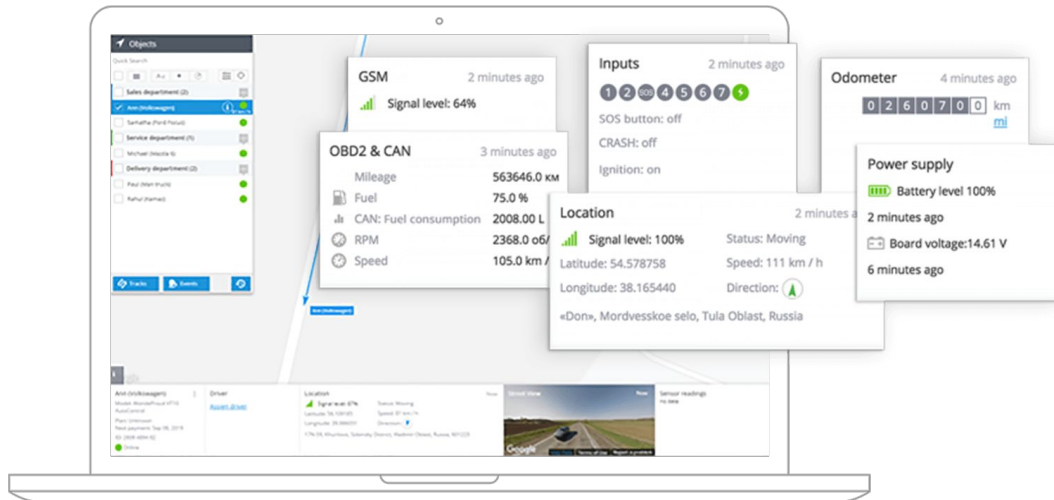

- Forward to the past
- Track and manage multiple objects
- Accurate real-time positioning
- 360° street view and traffic

## Features

# Real-time Telemetry Data

Seconds matter when it comes to high-value assets. Empower clients with profound realtime visibility:

Location

Battery life

Engine hours

Conditions (temperature, humidity)

Statuses

OBD2 and CAN

Container doors opening / closing

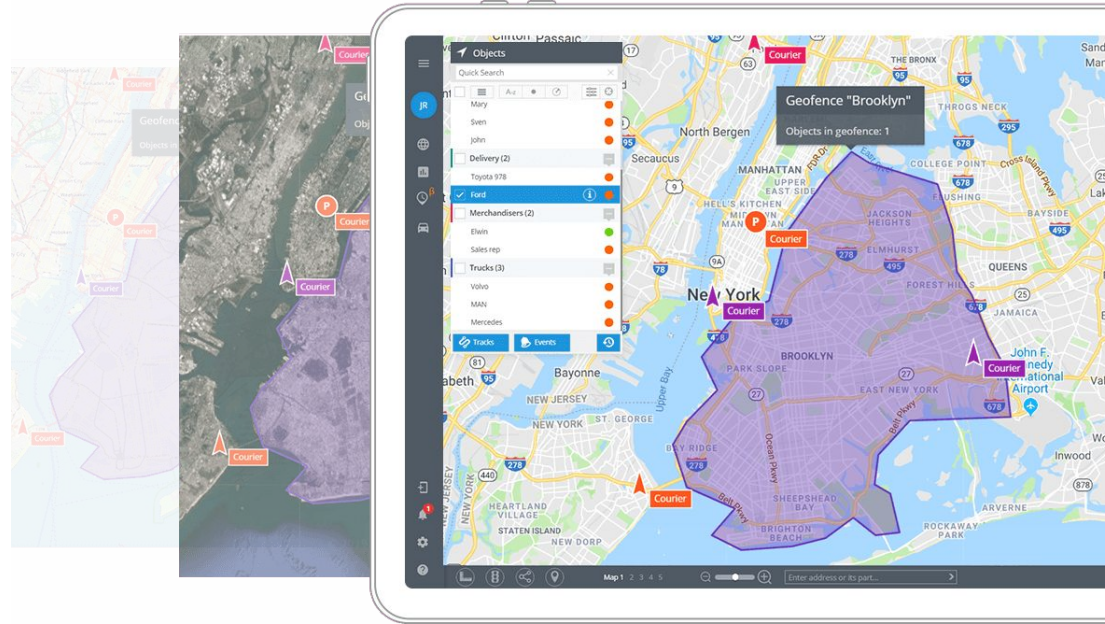

Odometer

## Features

# Geofencing and POI

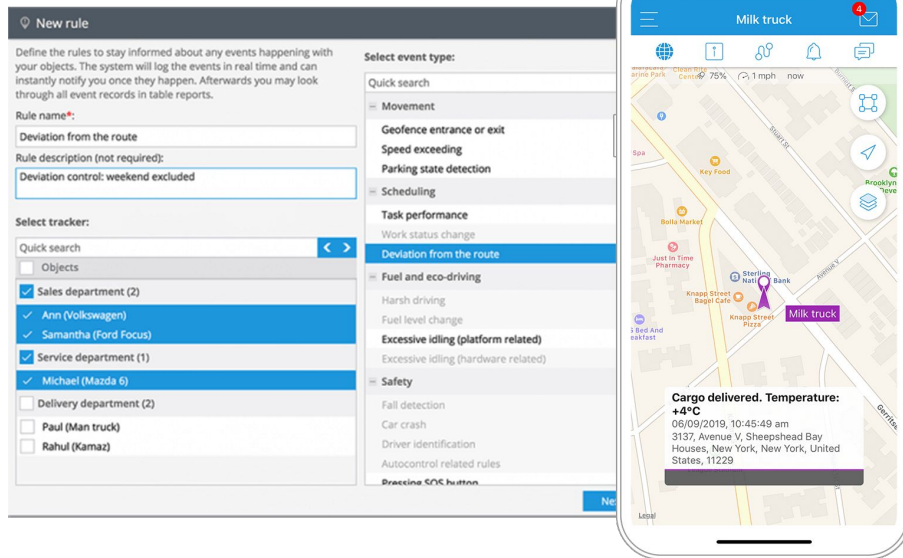

Protect cargo and equipment from unauthorized use or theft by sheltering them with a virtual fencing. Deliver automatic notifications when the asset leaves the perimeter. Help clients respond faster and recover misused assets.

## Features

# Alerts on everything important

Instantly learn about key events, react to changes on time with instant automatic alarms. Customize notifications.

● Fall detection

● SOS button pressing

● Route deviations

● Case intrusion

● Door closing/opening

● Temperature regime change

● Geofence entrance/exit

● Tow detection

## Features

# Over 1100+ GPS tracking devices closely supported

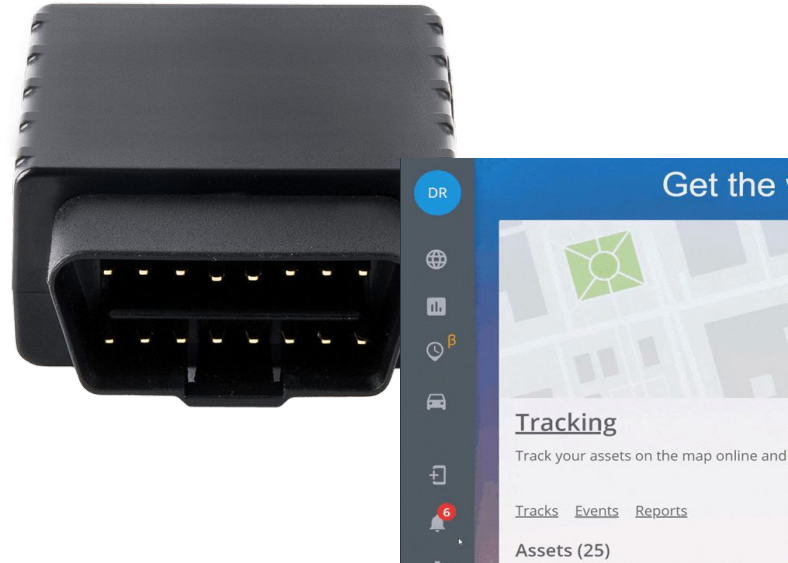

Effortlessly scale up your business, reach customers with different business needs and requirements with the hardware-independent platform.

## Features

# GPS hardware activation gone automatic

We automated M2M commands to provide plug-and-play simplicity of the initial configuration. Intuitively fill in the parameters and start GPS asset tracking in minutes.

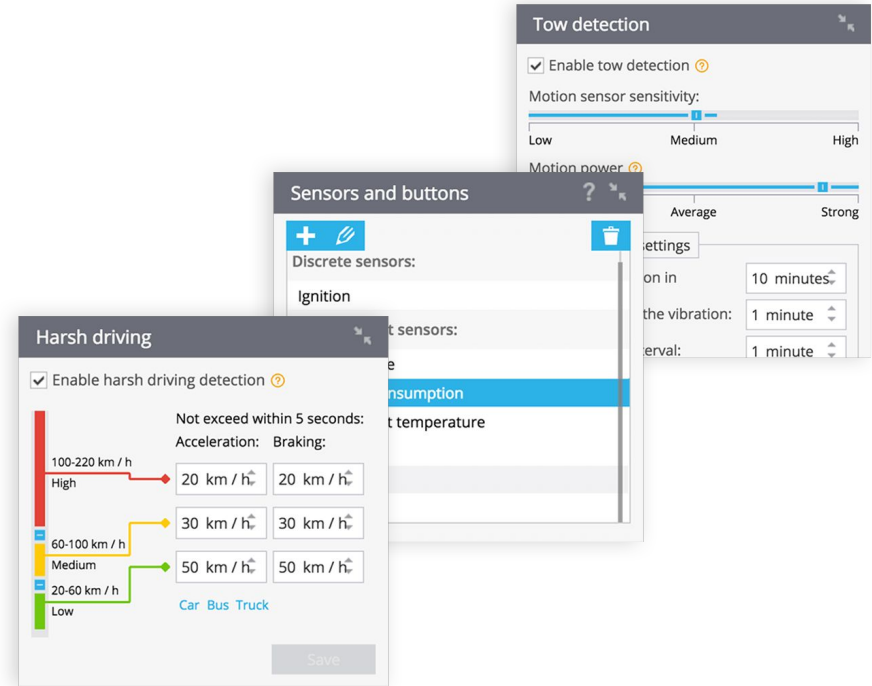

## Features

# Remote GPS hardware management

Navixy provides graphic interface with easy controls so that users could adjust parameters in a very convenient way. The smarter GPS tracker is, the wider set of options is available.

All saved settings are automatically converted to M2M commands and sent immediately even if the device is currently offline.

Thanks for watching!
